

1. Describe the overall purpose of the program. Choose Your Own Adventure Page

The Choose Your Own Adventure program lets users explore Mykonos, selecting tour guides and activities to shape their experience. It weaves an engaging story, where choices lead to either enjoyable or unfavorable outcomes.

2. Describe what functionality of the program is demonstrated in the video.

The video demonstrates the program's response customization based on user choices in the shell. Each choice has a unique storyline, incorporating user-provided pronouns and names. Importantly, the program is case-insensitive for input validation, and it prompts users to retype valid responses when necessary.

3. Describe the input and output of the program demonstrated in the video.

The user sees the program from an interface created by the python tkinter library. When a user types a response into the shell, it is remembered and later referenced in the outputs. When the user chooses an option, a string of different responses appears below the previous line. The string may include a list of options or a printed dialogue/statement.
